Use Dashboard Nodes for Creating UI(Web App)

Dashboards are a powerful opportunity to influence user behavior and boostretention rates. By using the data collected through research, designers can create a dashboard that displays actionable and relevant data. All this is made possible through dashboard UI design

If you design a proper and modern UI dashboard, it will give the users easy access to the information they need. For this to happen, the dashboard information needs to be easy-to-scan and contain only the key information. But, with many tools available, it canbe hard to make the right choice or not exaggerate with the use of features.

This is one of the many roles of a UX designer and as such, it demands knowingcertain tricks to be handled the right way.
